### Certifications:

CHPS - Collaborative for High Performance Schools (materials approved under California Section 01350 standards) - test for some emissions - long term test, not useful for immediate offgassing in first few days.

GG - GreenGuard - tests for some emissions - long term test, not useful for immediate offgassing in first few days.

GS - Green Seal (GS11 & Class A); Green Seal tests for VOC content, numerous toxics and some performance parameters

IAG - Indoor Advantage Gold; long term test, not useful for immediate offgassing in first few days.

MPI - Master Painters Institute; MPI, no testing, accepts manufacturer declarations on VOC and toxics content, test for some performance characteristics

Note that some brands have a high and low VOC version of the same paint brand line (e.g., Vista "Carefree" and Vista "Carefree EarthCoat"). **Always reference the product number** in addition to the product name when specifying and purchasing paints to insure getting the low VOC version. A "XX" in a product number indicates a series (e.g., "99XX" means the "9900 series")

### Checking out a new paint not already on this list:

Confirm that the VOC content meets the criteria of <20 g/l for most surfaces, <50 g/l for heavy use surfaces. VOC content is usually listed on the MSDS, the Specifications or Technical Data Sheet. Use the "Coating VOC" if available.

Also avoid paints with MSDS hazardous content warnings.
